

IN THE CLAIMS

This listing of claims will replace all prior versions, and listings of claims in the Application.

Claims 1-42 (Canceled).

Claim 43 (New): An information processor comprising:

a detecting unit configured to detect that a portable device having content stored therein is connected to the information processor;

a reading unit configured to read data from the portable device, the data identifying at least a portion of the content stored in the information processor; and

a generating unit configured to generate a package of identified content based on the data.

Claim 44 (New): The information processor according to Claim 1, further comprising:

a display control unit configured to control display of titles of the content belonging to the package generated when the package is selected.

Claim 45 (New): A method of exchanging content between an information processor and a portable device, comprising:

detecting that a portable device having content stored therein is connected to the information processor;

reading data from the portable device to the information processor, the data
identifying at least a portion of content stored in the information processor; and
generating a package of identified content based on the data.

Claim 46 (New): The method according to Claim 45, further comprising:
controlling the display of titles of the content belonging to a package generated upon
selection of the package via the information processor.

Claim 47 (New): A computer-readable carrier, including computer program
instructions that cause an information processor to implement a method of exchanging
content with a portable device, the method comprising:

detecting that a portable device having content stored therein is connected to the
information processor;

reading data from the portable device to the information processor, the data
identifying at least a portion of content stored in the information processor; and
generating a package of identified content based on the data.

Claim 48 (New): The computer-readable carrier according to Claim 47, further
comprising:

controlling the display of titles of the content belonging to a package generated upon
selection of the package via the information processor.
